

Dermatologic Micrographic Surgery: A Comprehensive Guide to Board Certification and Review

Dermatologic micrographic surgery (DMS) is a specialized surgical technique used to treat skin cancer. It involves the microscopic examination of the entire surgical margin of a skin lesion to ensure complete removal of cancerous tissue. DMS is a highly effective and precise method for treating skin cancer, and it is often used when other treatment options are not appropriate or have failed.

The Dermatologic Micrographic Surgery Board

The Dermatologic Micrographic Surgery Board (DMSB) is a non-profit organization that certifies dermatologists who have demonstrated proficiency in DMS. The DMSB was founded in 1982, and it is the only organization that certifies dermatologists in DMS in the United States.

The DMSB certification process is rigorous and includes a written examination, an oral examination, and a review of the candidate's surgical experience. To be eligible for certification, candidates must be board-certified dermatologists and must have completed a DMS fellowship program accredited by the Accreditation Council for Graduate Medical Education (ACGME).

The Benefits of DMSB Certification

DMSB certification is a valuable credential for dermatologists who want to practice DMS. It demonstrates that the dermatologist has the knowledge and skills to perform DMS safely and effectively. DMSB certification can also help dermatologists to attract patients and build a successful practice.

Preparing for the DMSB Certification Exam

The DMSB certification exam is a challenging, but it is possible to prepare for it successfully. There are a number of resources available to help candidates prepare for the exam, including:

- The DMSB website: The DMSB website provides a wealth of information about the certification process, including the exam blueprint and a list of study materials.
- DMSB study courses: The DMSB offers a variety of study courses to help candidates prepare for the exam. These courses are taught by experienced DMSB certified dermatologists.
- Private tutors: Private tutors can provide one-on-one instruction to help candidates prepare for the exam.

Taking the DMSB Certification Exam

The DMSB certification exam is a two-day exam that is held twice a year. The written exam is given on the first day, and the oral exam is given on the second day. The written exam consists of 150 multiple-choice questions. The oral exam consists of 10 case presentations.

Passing the DMSB Certification Exam

To pass the DMSB certification exam, candidates must score a 70% or higher on the written exam and a 75% or higher on the oral exam. Candidates who do not pass the exam can retake it once.

Maintaining DMSB Certification

DMSB certification is valid for 10 years. To maintain certification, dermatologists must complete 50 hours of continuing medical education (CME) in DMS every five years. The CME must be approved by the DMSB.

DMSB certification is a valuable credential for dermatologists who want to practice DMS. It demonstrates that the dermatologist has the knowledge and skills to perform DMS safely and effectively. DMSB certification can also help dermatologists to attract patients and build a successful practice.
